The Rehabilitation Centre at Fairmont

Board Certified Physical Medicine and Rehabilitation Doctors

The unique collaboration between the physiatrist, therapists and patient brings a focused and comprehensive approach to physical recovery at The Rehabilitation Centre. With training in both the medical as well as physical care, the rehabilitation physician (physiatrist) coordinates services with each patient's primary care doctor. This focus yields better patient outcomes and quicker recovery.

Doctors of Physical Medicine and Rehabilitation help patients maximize their rehabilitation potential.

The Rehabilitation Centre

The Rehabilitation Centre at Fairmont is unique because it provides care and rehabilitation separate from the other programming offered at Fairmont. In this dedicated unit we offer:

Two therapy gyms.

Aggressive discharge planning.

Dedicated dining room and lounge for rehabilitation patients.

Daily rehabilitation rounds led by our physiatrists.

Home assessments that help shape the patient's rehabilitation program.

Recommendations on adaptive equipment and home safety.

Assistance with services post-discharge.

Rehabilitation Therapists

The Rehabilitation Centre's therapy team consists of physical, occupational and speech-language therapists who are trained in the latest rehabilitation methods and are certified in Kinesiotaping, Lymphedema treatment wound care, E-Stim and Ultrasound treatment. Specific areas of expertise include orthopedic and neurological rehabilitation as well as general deconditioning as a result of hospitalization.

Skilled rehabilitation therapists are trained in the most current treatments and techniques.
